

Status Of The Claims

Claims 1-35 (canceled)

Claim 36 (new) A networked gaming system, comprising:

a casino gaming system located at a remote casino location, the

casino gaming system comprising:

a casino central computer,

at least one casino gaming machine in electronic data

communication with the casino central computer,

a lottery gaming device adjacent to the casino gaming

machine and in electronic data communication with the

casino central computer and the casino gaming machine,

the lottery gaming device providing a lottery game,

the lottery gaming device including means for

activating the lottery gaming device upon the

occurrence of the predetermined event so as to allow a

player to play in the lottery game and means for

generating lottery tickets,

a player input device in electronic data communication

with the lottery gaming device that enables the player

to play in the lottery game,

means for indicating that the player is entitled to play

in the lottery game upon the occurrence of the predetermined event, and
an electronic player tracking system that records data pertaining to player activity and compares the predetermined event to the recorded data to determine if the predetermined event has occurred, and
a central lottery computer located at a remote location, the central lottery computer being in electronic data communication with the casino central computer and lottery gaming device, the central lottery computer being configured to provide a pre-recorded, live or graphically generated lottery game to the lottery gaming device; and
a wide area network controller in electronic data communication with the central lottery computer and casino central computer, the wide area network controller being configured to route the lottery game to the casino central computer.

Claim 37 (new) The networked gaming system according to claim 36 wherein the casino gaming machine is a slot machine.

Claim 38 (new) The networked gaming system according to claim 37 wherein the player tracking system comprises a slot

accounting data system that records data pertaining to player's slot machine activity and compares the predetermined event to the recorded data to determine if the predetermined event has occurred.

Claim 39 (new) The networked gaming system according to claim 36 wherein the lottery gaming device is a video lottery terminal.

Claim 40 (new) The networked gaming system according to claim 36 wherein the casino central computer comprises a data base for storing data recorded by the electronic player tracking system.

Claim 41 (new) A networked gaming system, comprising:

- a plurality of remotely located casino gaming systems, each casino gaming system being located in a corresponding casino, each casino gaming system comprising:

- a casino central computer,

- a plurality of casino gaming machines in electronic data communication with the casino central computer,

- a plurality of lottery gaming devices, each lottery gaming device being adjacent to a corresponding casino gaming machine and in electronic data communication with the

corresponding casino gaming machine and the casino central computer, each lottery gaming device providing a lottery game and comprising means for activating the lottery gaming device upon the occurrence of the predetermined event so as to allow a player to play in the lottery game and means for generating lottery tickets,

a player input device in electronic data communication with the lottery gaming device that enables the player to play in the lottery game,

means for indicating that the player is entitled to play the lottery game upon the occurrence of the predetermined event, and

an electronic player tracking system that records data pertaining to player activity and compares the predetermined event to the recorded data to determine if the predetermined event has occurred, and

a central lottery computer located at a remote location, the central lottery computer being in electronic data communication with the casino central computer and the plurality of lottery gaming devices, the central lottery computer being configured to provide a pre-recorded, live or graphically generated lottery game to the lottery

gaming devices; and
a wide area network controller in electronic data communication
with the central lottery computer and casino central
computer, the wide area network controller being
configured to route the lottery game to the casino central
computers.
